RealVideo [codec for RealMedia]	No

\* Media container = video format (video codec) + audio format (audio codec) + subtitle

\*\* Video format (codec) is the compression method

MP4 (.mp4) is a container format used to store both video and audio data.

Many people still believe that MP4 is the abbreviation of MPEG4, MP4 is a container format while MPEG4 stands for a video encoding algorithm.

There are other container formats that can be used for video formats like ASF, AVS, Ogg, etc.

- AV7200 does not have USB.
- AV7800 USB only support AVI (No Divx) standard resolution of 480p or less.
- AV7950H USB is for CHARGING ONLY!
